

Airbus Industrie A319, A320 and A321 Series Aeroplanes

---

**AD/A320/1**

**Artus Transformer Rectifiers**

**6/89  
DM**

Applicability: All A320-111 and A320-211 aircraft.

Requirement: 1. Install in positions 1 and 2, transformer rectifier units Artus P/N TRO3B4200 Amendment J.

2. Replace the transformer rectifier units Artus P/N TRO3B4200 amendment J installed in positions 1 and 2, with transformer rectifier units Artus P/N Y005-2 in accordance with Airbus Industries SB A320-24-1024.

3. Replace the transformer rectifier unit in the essential position which may have been used before in positions 1 or 2 with transformer rectifier Artus P/N TRO3B4200 amendment J equipped with new diode bridges.

4. Replace the transformer rectifier unit in the essential position with transformer rectifier unit Artus P/N Y005-2 in accordance with Airbus Industries SB A320-24-1028.

*Note: French AD 89-023-001 (B) R1 refers.*

Compliance: Requirement 1. Prior to 1 May 1989.

2. Prior to 600 hours total TIS or 31 July 1989.

3. Prior to 1 June 1989.

4. Prior to 31 December 1989.

Background: Failure of the transformer rectifier units may lead to the loss of several flight control computers essential for flight safety.
