

Boeing 767 Series Aeroplanes

**AD/B767/24
Amdt 1**

Door Counter Balance Torsion Spring

5/93

- Applicability: Model 767 series aircraft with entry or service doors equipped with slide rafts; line positions 002 through 409.
- Requirement: Action in accordance with the technical requirements of FAA AD 93-01-19 Amdt 39-8473.
- Note: Boeing ASB 767-52A0053 Revision 2 refers.*
- Compliance: As specified in the Requirement Document with a revised effective date of 29 April 1993.
- Background: A broken counterbalance torsion spring condition would require extra effort to unlatch the door, and manual assistance to open the door in an emergency. A broken spring could jam the counterbalance assembly and prevent opening of the door during an emergency evacuation. Amendment 1 is issued in response to a new FAA AD which provides for an optional installation which, when accomplished, constitutes terminating action for the currently required repetitive operational checks.
