Wing Main Spar and Lower Skin

10/67

Applicability: All models in agricultural category.

Requirement: Carry out a visual inspection for cracking of the wings in the following areas:

1. The corners of the skin cutouts through which the lift strut fork passes.
2. All visible elements of the main spar lower flange front and rear faces in the region of the lift strut attachment.

Pay particular attention to the areas around the spar to skin rivets. The affected areas must be thoroughly cleaned before inspection.

Compliance: Before 4000 hours total time in service on wings and thereafter at intervals not exceeding 100 hours time in service.
