

Rolls Royce Turbine Engines - RB211 Series

AD/RB211/13

Thrust Reverser Functional Test

6/91

- Applicability: All RB211-524G and 524H engines not incorporating the requirements of Rolls Royce Service Bulletin RB211-78-9347.
- Requirement: Action in accordance with the requirements of Rolls Royce Mandatory Service Bulletin RB211-78-9274.
- Compliance: As detailed in Requirement Document.
- Background: This Directive requires a functional test to be carried out following any abandoned take-off where the thrust reversers have been deployed. This requirement reflects advice that following an abandoned take-off, thrust reverser operation times may become extended (10 seconds or more).
